***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 30,33,34,45 and 48-50 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The specification as originally filed does not provide support for the elements being radial plates with an external edge protruding beyond the virtual cylinder. The external edge of the radial plates in fig. 8 would be at the same distance as the virtual cylinder, not protruding beyond it. The only embodiment which reads on each of the independent claims now is that of fig. 8. Each of the independent claims recites "each said protuberance has an outer end that is at least one of inclined and rounded along a plane that is transverse to the axis of rotation of said roller and that passes through said element from which said protuberance extends". Each of the other embodiments has a protuberance which is rounded along a plane transverse to the axis of rotation, but which does not pass through the element.

For example, fig. 2 would show an element (arm with slot) and a protuberance 16. The plane along which the protuberance is rounded does not pass through the arm (element) but rather passes behind the arm.
